## First list of the scientific names referring to the geographical entities based upon the info-system of the Cesa II. Lepidoptera

Ahmet Ömer Koçak    Muhabbet Kemal <sup>1</sup>

**Abstract:** First list of the scientific names referring to the geographical entities based upon the  
info-system of the Cesa II. Lepidoptera. *Cesa News* 136: 1-65.

In this paper, totally 5764 names, attributed to the geographical entities, are listed as a name index.

**Key words:** Scientific names, geographical names, Lepidoptera.

Within the framework on the Entomofauna of the Old World, the authors have an interest about the etymological origin of the scientific names that used in the insect groups. First comprehensive lists of the patronymic names of the Lepidoptera have been published by the authors in two different studies (Koçak & Kemal, 2008; Kemal & Koçak, 2008). More than 5000 patronymic names of the Lepidoptera have been listed there.

The first part of the present work was published for the Pterygota orders (except Lepidoptera) (Koçak & Kemal, 2015a). Later, a list of the patronymic names of the Pterygota orders was also published (Koçak & Kemal, 2015b). All these works are based upon the info-system of the Cesa.

In the present paper, totally 5764 valid names of the Lepidoptera, attributed to the geographical entities, are listed as an alphabetical name index.
